

ON-DEMAND  
SOLUTIONS

With the aim of serving the world, we are engaged in manufacturing, exporting and selling a wide range of industrially developed **Sorting Plants**. Our product range includes wide range of different **Machines**.

HTECH is a **vision oriented company** and is backed by **cutting edge technology** to deliver best products and services in the market. Operating for decades with a single goal to offer our clients precisely engineered packing machines for fresh fruits and vegetables and processing industry as per their needs and demands.

The infrastructural support along with a well managed team of industrially experienced professionals helps us in improving the quality of our products and meeting bulk demands of our clients. By this time in the process of writing a story of our success, we have been able to cross many installations throughout Europe, Australia, Canada and United States.

Support of our customers and their trust in us acts as the power booster for us.

**Our Research and development unit** is well equipped with latest instruments and are dedicatedly engaged in researching and developing innovative machines to serve our clients better. The unit consists of highly qualified engineers and technical experts and keeps a track on latest development round the globe and brings them into process of manufacturing with immediate effects.

We are also supported by our quality analysis team, responsible to maintain the quality standards of our products. Quality experts working with us conduct stringent quality tests at each stage of product development to ensure international quality standards. As quality is the only thing that finally helps us in motivating our clients and win an edge over our competitors. We always welcome the feedbacks from our clients to serve them better.

We are manufacturer of sorting plants, packing equipment and casepackers.

Pavel & Tomáš Holík  
Managing Directors

Our company has acquired and built several production facilities over the years that allow us to produce machinery quickly and effectively. We utilize modern technology, including CNC center, CNC bending machinery, waterjet cutting system and chambers for abrasive blasting.
