

machine description ::

Even flow is made to stabilize the flow of produce into the dosing equipment. While the flow of produce from the earlier stages of the line can be unsteady and erratic, this machine passes on the produce evenly and steadily, depending on the requests of the consecutive equipment.

Machine is stainless to withstand working with washed and wet produce. In the upper part there is a height-adjustable sensor controlling the level of produce in the buffer. Depending on the need the belt below the entrance end moves the bottom up and down and thus regulates the slope of the belt which is, to easy the movement of produce, furnished with several low profile cleats.

technical data ::

	EF 1	EF 2
width	1300 mm	2000 mm
length	1800 mm	2000 mm
capacity	1,1 m ³	1,7 m ³

example of use ::
